This unit creates pure air naturally, by using the natural elements of invisible Ultra Violet light (UV) - light that is emitted by the sun at the violet end of its spectrum. Through innovative, safe and environmentally friendly technologies, this UV air treatment system cleanses residential air without ozone - and for only pennies a day! Many tests have proven that UVC lighting installed in the air supply of a heating or cooling unit gradually eliminates a high percentage of harmful bacteria from residential air treated within homes. Designed to meet the growing consumer demand for clean air in the home, the Breathe Easy UV system can easily be installed and maintained in furnaces by your local contractor. Each separate unit is designed to provide optimum UV treatment of up to 3,000 sf, providing clean air at considerably less cost than other UV treatment products or filtration systems currently available on the market.

The U.S. Government requires UV lamps above cooling coils for government buildings and uses UV lamps to control microbial growth in buildings. Now the average homeowner can apply the same safety measures in their own living spaces. Considering the well-reported dangers of mold and bacteria in the home, it just makes sense to attack these problems at the source. You can to, with a dealer-installed Breathe Easy UV Germicidal Lamp.

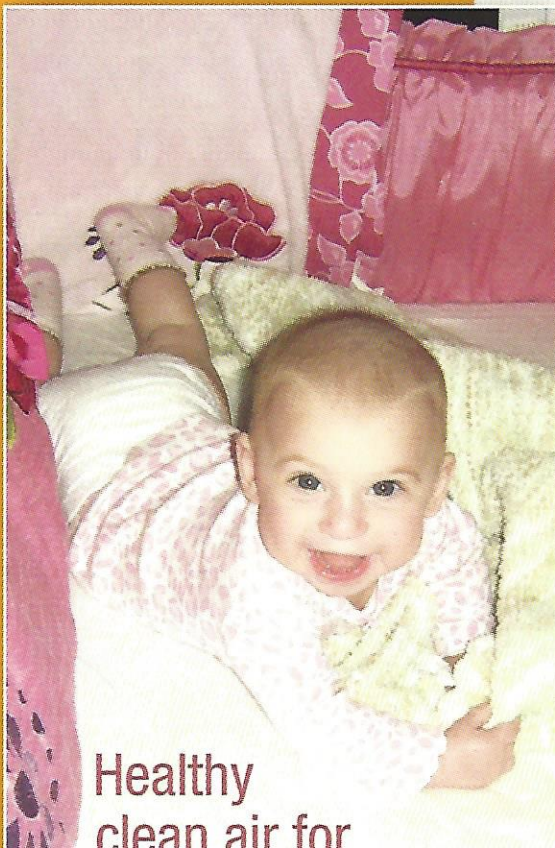

BREATHE EASY!

A bright idea
in air quality

Single Lamp

Safe and effective in helping to eliminate airborne allergens, bacteria. Reduces odors by treating the air/furnace with UV sterilization all day.
